

The 4-Pillar Systems Diagnostic Checklist

A 15-Minute Operational Health & Revenue Leakage Self-Audit for Trade Fleet Owners (\$1M-\$10M)

Use this checklist to score your service enterprise across our 4 core operational pillars. Each pillar contains 5 benchmarks (5 points each, 100 points total). Calculate your score to identify active revenue leakage.

PILLAR 1: Speed-to-Lead & Response Latency (Max: 25 Points)

- ☐ **Under 60-Second Inbound Response:** Inbound web form and emergency calls receive automated confirmation within 60 seconds (Harvard benchmark).
- ☐ **Automated After-Hours SMS Triage:** Unassisted calls after 5:00 PM trigger immediate 2-way text to classify active leaks vs routine service.
- ☐ **Weekend Priority Routing:** Genuine emergencies automatically route to on-call technicians without waking up the founder or paying call center surcharges.
- ☐ **Google Maps Latency Tracking:** Firm monitors speed-to-lead response decay from local Google Business Profile calls.
- ☐ **Automated Missed-Call Recapture:** System tracks abandoned calls and re-engages prospective leads within 3 minutes.

PILLAR 2: Customer Experience & Support Architecture (Max: 25 Points)

- ☐ **Automated Review Generation:** Invoices closed in CRM automatically trigger SMS review requests within 15 minutes of job completion.
- ☐ **Review Velocity Consistency:** Firm generates 15-25 verified 5-star reviews every 30 days to dominate Google Map Pack rank.
- ☐ **Live Dispatch Notifications:** Customers receive 'Technician En Route' tracking link with photo, ETA, and technician bio.
- ☐ **Self-Service Scheduling Portal:** Repeat customers can book routine maintenance and annual tune-ups directly online.
- ☐ **Post-Service Quality Pulse:** 48-hour automated check-in SMS ensures complete customer satisfaction before billing dispute occurs.

PILLAR 3: Quoting Architecture & Choice Psychology (Max: 25 Points)

- ☐ **Good-Better-Best Digital Proposals:** Field technicians present 3-tiered options on tablets rather than 1 flat price quote.
- ☐ **Decoy Effect Integration:** Middle 'Better' tier is engineered to maximize gross margin and capture 65%+ of equipment conversions.
- ☐ **Integrated 0% Financing:** Monthly payment options are displayed automatically on quotes over \$2,500.
- ☐ **Automated Quote Follow-Up:** Unsigned estimates trigger automated 24-hour and 72-hour SMS reminder sequences.
- ☐ **Digital Signature & Deposit:** Customers can authorize quotes and pay initial deposits instantly on mobile.

PILLAR 4: Internal Operations & Infrastructure (Max: 25 Points)

- ☐ **Dual-Trade Cross-Sell Automation:** CRM detects single-trade clients and triggers seasonal cross-sell opportunities (e.g. water heater checks).
- ☐ **Sub-2.5s Mobile Page Speed:** Website loads in under 2.5s on 4G mobile, preventing the 52% bounce penalty.
- ☐ **Authenticated Email Infrastructure:** SPF, DKIM, and DMARC records are configured to prevent commercial quotes landing in SPAM.
- ☐ **Unified Dispatch & Inventory:** Truck stock syncs with job invoices to eliminate second-trip parts runs.
- ☐ **Deloitte Effort vs. Impact Prioritization:** Leadership reviews monthly roadmap matrix ranking operational fixes by gross value recovery.

Self-Audit Score Interpretation

Score Range	Classification	Operational Reality & Recommended Action
85–100 Points	Tier 1: Industry Leader	High-efficiency operations. Minimal revenue leakage. Scale ad spend with confidence.
65–84 Points	Tier 2: Moderate Leakage	Leaking \$8,000–\$15,000/mo in after-hours abandonment and flat-pricing surrender.
Under 65 Points	Tier 3: Severe Hemorrhage	Surrendering \$25,000+/mo to competitors. Immediate 4-pillar systems overhaul required.
