

METHODOLOGY

Inside an Institutional 4–Pillar Diagnostic

Why traditional business audits fail — and how engineering rigor pinpoints exact dollarized leakage.

4–Pillars

Sales · Support · Field Delivery · Internal Ops

The institutional framework for \$1M–\$10M trade contractors.

THE 4 DOMAINS

The 4 Operational Pillars

We evaluate enterprise infrastructure across 4 independent systems:

01

Sales & Customer Acquisition
Mobile TTFB latency, review velocity, and suburban landing page coverage.

02

Customer Support & Dispatch Intake
Speed to lead, 24/7 emergency triage, and CRM booking workflows.

03

Field Service & Delivery
Technician en-route SMS, GPS visibility, and tiered Good/Better/Best quoting.

04

Internal Operations & Infrastructure
DNS authorization (SPF/DKIM/DMARC), billing automation, and CRM sync.

DIAGNOSTIC RIGOR

The 4-Step Reasoning Scaffold

Zero vague opinions. Every score is derived through a strict formula:

Evidence (Observed Telemetry)

Raw technical signals from DNS records, server latency, and GBP reviews.

Expected State (Benchmark)

The operational benchmark achieved by top-decile firms in your sector.

Gap Magnitude & Dollarized Leakage

Measuring the operational delta into exact monthly and annual revenue lost.

PRIORITIZATION

Deloitte Effort vs. Impact Prioritization

Categorizing all recommendations into high-ROI quick wins:

Phase 1: Tactical Quick Wins (< 30 Days)

Low-CapEx, high-return adjustments (DNS repair, review SMS, tiered quoting) with < 14-day payback.

Phase 2: Operational Scale (30–90 Days)

24/7 automated intake triage, automated membership cross-sell, and suburban SEO expansion.
