

PRICING STRATEGY

Why Single-Price Estimates Forfeit 22% of Margin

The subconscious psychology of contractor quoting — and how choice architecture transforms ticket sizes.

+22%

Average Ticket Size Lift

Observed across 15-van plumbing and HVAC contractors.

THE FLAW

The Binary Trap of Single Quotes

When you give a customer one number (e.g. \$4,800), you force a binary decision:

"Should I buy this, or should I shop around?"

The client's brain immediately compares your single price against the entire market or decides to delay.

Zero Choice for Upgrades

Customers who value premium warranties, filtration, or higher-efficiency units are never given the chance to say yes.

THE ARCHITECTURE

The 3-Tier Choice Architecture

Switch field technicians to digital Good / Better / Best estimates:

01 Tier 1: Standard (Baseline)
Solves the immediate mechanical failure. Standard 1-year warranty.

02 Tier 2: Enhanced (Most Popular)
Upgraded equipment + 5-year labor warranty + free seasonal tune-up.

03 Tier 3: Premium (Total Peace of Mind)
High-efficiency system + whole-home filtration + lifetime membership.

THE OUTCOME

The Psychological Shift

The customer's question shifts from external shopping to internal selection:

60%

Choose Tier 2 or Tier 3

Clients self-select higher tiers when choice architecture is clear.

Zero Extra Lead Costs

Generating an extra \$18,000 to \$25,000 monthly from the exact same job volume.
